October 24, 1958

## RECORD STOCKS OF FEED AND FOOD GRAINS

Stocks of wheat, corn, sorghum grain, barley and soybeans in all positions on October 1 moved to new record levels for that date. Wheat stocks at 2.1 billion bushels, corn at 1.5 billion, sorghum grain at 309 million, barley at 498 million and soybeans at 21 million bushels exceeded the previous records by 18, 3, 280, 7, and 49 percent, respectively. Oat stocks approached the record level and were 15 percent above a year earlier. Rye, and flaxseed stocks each exceeded the previous year with rye sharply above average. Stocks of feed grains -- corn, oats, barley and sorghum grain -- totaled 83 million tons, nearly one-sixth above the previous record of 71.7 million tons in storage October 1, 1957.

Stocks of 2,126 million bushels of wheat stored in all positions on January 1 were the largest of record for that date, nearly a third larger than the previous year and more than one-half larger than the 10-year average. The stocks total was nearly one-half larger than the 1958 production, reflecting a continued large carry-over of old wheat on July 1.

Off-farm wheat stocks of 1,491 million bushels were nearly a fourth larger than a year earlier with stocks in each off-farm position showing an increase. Nearly three-fourths of the total off-farm stocks were either owned by the Government or were under Government loan.

Rye stocks of 33 million bushels stored in all positions on October 1 were more than 10 percent larger than a year earlier and more than a third larger than average. Off-farm stocks of 13.5 million bushels were slightly below October 1, 1957 and were the smallest since 1953. In contrast, farm stocks of 19.5 million bushels on October 1 were the second largest since 1943 and accounted for nearly 60 percent of total stocks. Stocks at interior elevators and warehouses were the third largest of record but only 10 percent above a year earlier. Holdings in CCC bins were above last year but still relatively small.

Old Corn in all storage positions October 1 at 1,467 million bushels continues an upward trend in carry-over which began in 1953. However the increase in carry-over of 48 million over a year ago was far less than the yearly increase the past few years. Farm stocks at 341 million bushels were well

below a year earlier but there was an increase in stocks in interior mills, elevators and warehouses as well as CCC bins. Nearly all the off-farm stocks were owned by the CCC and most of the farm stocks of old corn were soon to be delivered to the CCC or resealed. Disappearance of old corn from all storage positions during the July-September quarter was a record 623 million bushels, compared with 548 million the same quarter last year. This large disappearance reflects the greater amount used for feeding the increased livestock numbers.

Oats stocks on October 1 of 2,332 million bushels were 15 percent larger than a year earlier and largest since 1945 except for October 1955, which matched 1958. As usual at this season most oats were on farms - this year 90 percent. The 1,199 million bushel farm stocks total represents the largest October 1 holdings on farms since 1945 and was 14 percent larger than a year earlier. Off-farm storage also was considerably larger than at the same time last year and, except for 1955, the largest of record for the date. Holdings owned by CCC or under price support, although larger than a year earlier were of relatively minor importance.

Oats disappearance during the July-September quarter of 413 million bushels was larger than in 1957 but slightly below average.

Stocks of barley on October 1 were a record high of 498 million bushels and 7 percent above the previous record a year earlier. Farm stocks at a record 310 million bushels were 12 percent above the large holdings on October 1, 1957. Total off-farm stocks at 189 million bushels were only slightly less than the record a year earlier. These were comprised of terminal storage holdings of 44 million bushels, holdings by interior mills and elevators at 133 million and CCC bin stocks of 12 million bushels. CCC bins held  $2\frac{1}{2}$  times as much barley as a year earlier, but the other off-farm positions were below last year. Almost one-half of the off-farm stocks were Government owned or under CCC warehouse loan. Disappearance of barley from all positions during the July-September 1958 quarter was a record high of 136 million bushels.

Holdings of Old Sorghum Grain in all storage positions on October 1, at 309 million bushels were nearly four times a year earlier and the previous record in 1956. These carry-over stocks represent over half the large 1957 production and nearly all the grain is owned by CCC. All the grain was in commercial storage except 3 million in CCC bins and 13 million bushels on farms. About 3 million bushels of the farm stocks was grain resealed under Government loan. Disappearance of sorghum grain from all storage positions during the July-September quarter was 34 million bushels, well above the same quarter last year. July 1, 1958 stocks in off-farm positions has been revised to 315 million bushels as reports on CSS holdings on July 1 indicate about 25 million bushels more than originally estimated.

Soybean carryover stocks in all storage positions on October 1, are estimated at 21 million bushels. These are the highest October 1 soybean stocks of record and are more than double the nearly 10 million bushels in storage a year earlier.

From an estimated supply of 490 million bushels (carryover October 1, 1957 of 10 million plus 1957 preliminary production of 480 million bushels) a disappearance of about 469 million bushels is indicated for the crop year by the October 1 stocks. Actual disappearance for the period includes nearly 354 million bushels processed for oil, about 86 million bushels exported and seed and feed about 31 millions. This total of 471 million bushels is in close balance with the indication from stocks.

1/ Includes stocks at Interior Mills, Elevators and Warehouses, commercial stocks reported by Grain Division, AMS, at terminals, and those owned by Commodity Credit Corporation which are in bins and other storages under C.C.C. control.

2/ Off-farm total plus farm stocks.

(Continued from page 2)

Flaxseed stocks in all storage positions on October 1 totaled 37 million bushels. This was sharply above the 27 million bushels on hand a year earlier.

Current stocks indicate a disappearance during the July-September quarter of 11.7 million bushels from a supply of 48.7 million bushels (carryover of 8.7 million plus a new crop of 40.0 million bushels). During the quarter, crushings were reported at 5.4 million bushels and exports for the same period are estimated at 3.3 million bushels. This accounts for 8.7 million bushels and does not take into account new crop flaxseed processed prior to July 1.
